BOREAS HYD-08 1996 GROSS PRECIPITATION DATA

[Get Data](#)

BOREAS HYD-08 Gross Precipitation Data

Summary:

The BOREAS HYD-08 team made measurements of surface hydrological processes at the SSA-OBS Tower Flux site to support its research into point hydrological processes and the spatial variation of these processes. Data collected may be useful in characterizing canopy interception, drip, throughfall, moss interception, drainage, evaporation, and capacity during the growing season at daily temporal resolution. This particular data set contains the gross precipitation measurements for July to August 1996. Gross precipitation is the precipitation that falls that is not intercepted by tree canopies.

A guide document which includes more information about this data set can be found at http://daac.ornl.gov/daacdata/boreas/HYD/h08gp96/comp/HYD08_GrossPrecip.txt.

ORNL DAAC maintains information on the entire [BOREAS Project](#).
